

Advantage of RFID based label system

Demonstrates technical ability of KStrong the only company in the region to provide RFID based inspection solution and creates Client confidence

Recurring revenue through Annual Revalidation

Easy work completion reports through Kare

Constant customer connect throughout the service life of the lifeline, thus, generating additional business

Advantage of Compass software

1 Allows computation of forces and deflection in lifelines and helps to generating optimum bill of quantity

4 Provides access to all the technical documentation including technical data sheets, User manual, certificates, do's and don'ts etc

5 Geo fencing feature ensures the presence of Installer near the lifeline during inspection

2 Automated reminder system (AIR) reminds pending inspections

6 Allows installer to capture images as proof of evidence

3 Guides installers to inspect the lifeline correctly

7 Grouping feature escalates non-conformities up the hierarchy of client

Advantage of RFID label

1 Weather proof

6 Additional dynamic QR code and UIN number for alternate readability

2 Can be read by phones, no need of expensive readers

7 UV protective films to prevent degradation of printing

3 Dynamic RFID: Displays status of Inspection without Kare installed in phone

4 Heat resistant up to 150 degrees

5 Robust aluminium frame

The KStrong Compass help inspection of fixed lifeline system ensuring they are fit to use throughout their service life.
