KSTRONG®
UNRIVALED SAFETY.

HOW TO SANITIZE YOUR FULL BODY HARNESS

KStrong recommends to follow these simple steps to sanitize your harness before use -

1

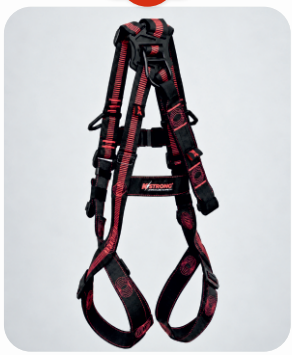

Hang the harness or lanyard on a hanger, ensuring that webbings do not overlap.

2

Use a good quality alcohol based spray sanitizer and spray it evenly on the complete product.
(It is recommended to spray from a distance of 1 feet to cover a larger area)

3

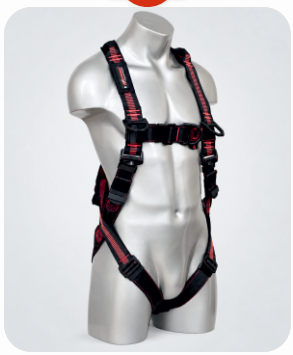

Leave it to naturally dry in shade at room temperature.

4

Check with a tissue to ensure it is completely dry.

5

Conduct all pre-use checks on the harness making it ready to use.

It is recommended that each harness be assigned to an individual user and not shared. The user's name may be written directly on the KStrong webbing with a marker in a visible location. Do not mark stitching or obscure product labels or inspection information.

*** For an effective Sanitizer, the alcohol concentration of 60% or higher is recommended***
Alcohol based sanitizers do not affect the functionality and performance of the harness
